(54) Title: MAGNETIC BATTERY

(57) Abstract

A method for producing electricity comprises the steps of providing a source of magnetic field (10); providing a system (10 and 26) for extracting energy from the magnetic field, the system having a certain efficiency level; and inputting energy ( $2E_f$ ) to the system to at least compensate for losses from the certain efficiency level, thereby causing the system to operate to generate energy from the magnetic field.
